

## Erratum: “Exposure to Brominated Trihalomethanes in Water During Pregnancy and Micronuclei Frequency in Maternal and Cord Blood Lymphocytes”

In the article “Exposure to Brominated Trihalomethanes in Water During Pregnancy and Micronuclei Frequency in Maternal and Cord Blood Lymphocytes” by Stayner et al. [*Environ Health Perspect* 122:100–106 (2014)], there was an error in Table 1. The number of women in exposure quartile 4 who had missing data for maternal smoking was given as zero instead of 3. The corrected table appears below and has also been corrected online.

EHP regrets the error.

**Table 1.** Study population characteristics [*n* (%)]<sup>a</sup> for all and by quartiles of the residential exposure to brominated trihalomethanes during the full pregnancy.<sup>b</sup>

Characteristic	All ( <i>n</i> = 240)	Quartile 1	Quartile 2	Quartile 3	Quartile 4	<i>p</i> -Value <sup>c</sup>

All variables correspond to maternal characteristics during pregnancy.

<sup>a</sup>Number of subjects with micronuclei analyses (either mother or newborn). <sup>b</sup>Brominated trihalomethanes in residential water quartiles: 0.06–0.15; > 0.15–0.74; > 0.74–4.44; > 4.44–7.09 µg/L. <sup>c</sup>*p*-Value based on Fisher exact test for table frequencies (excluding the missing values). <sup>d</sup>Exposed to secondhand smoke either at work or at home.
